Product Overview

High-Performance Fire Protection

The ESF series is a horizontal split case fire pump engineered for reliability and high efficiency in critical fire suppression applications. Designed in accordance with UL448 standards, these pumps provide consistent water flow and pressure. The split case design ensures easy maintenance and inspection without the need to disturb existing piping, making it an ideal choice for commercial, industrial, and municipal systems.

Standards & Compliance

Safety Certification

UL448 Compliant

Key Features

Operational Advantages

- High flow rate capability
- High operational efficiency
- Stable and reliable performance
- Low noise operation
- Long service life
- Easy to install and maintain

Design & Construction

Configuration	Horizontal Split Case
Maintenance Access	Split case design (allows inspection without disturbing piping)
