

Horizontal Spreader Lifting Beam

This horizontal lifting beam is designed for spreader applications. Constructed from robust steel, the beam ensures safe and efficient lifting of heavy loads.

Product Overview

Horizontal Spreader Lifting Beam

The Horizontal Spreader Lifting Beam is a heavy-duty solution engineered for safe and efficient load handling across construction, manufacturing, and logistics sectors. Constructed from robust steel, this beam features multiple attachment points to accommodate versatile rigging configurations for various load types. Its high-visibility finish ensures enhanced safety during operation, making it an essential tool for demanding overhead lifting tasks.

Design and Configuration

Available Configurations	H Style, Four-Point, Adjustable, Fixed Spread, Roll Lifting
Material	Robust Steel

Safety and Compliance

Safety Features

High-visibility finish • Multiple attachment points

Applications

Primary Industries

- Construction
- Manufacturing
- Logistics
