

Horizontally Opposed Cylinder Engine with Transmission

This high-performance engine features a horizontally opposed cylinder configuration and air cooling. It is coupled to a blue-painted transmission, suggesting a specialized application.

Overview

High-Performance Engine and Transmission Assembly

This robust power unit features a horizontally opposed cylinder configuration, engineered for stability and high-performance output. Designed with prominent cooling fins for effective heat dissipation, the engine is paired with a specialized blue-painted transmission system. This integrated assembly is built for durability and is well-suited for demanding vehicle or machinery applications requiring consistent power delivery.

Technical Specifications

Engine Configuration	Horizontally Opposed
Cooling System	Air-cooled
Fuel Delivery	Carburetor
Intake System	Air filter assembly included

Drivetrain

Transmission Type	Integrated gearbox
Finish	Blue-painted transmission

Features

Design Features	High-performance, Durable, Air-cooled fins, Integrated assembly
