

Hot Rolled Steel Coil

Hot rolled steel coil is manufactured at high temperatures. It is used in industries such as automotive, construction, and manufacturing.

Product Overview

Versatile Industrial Material

Hot rolled steel coil is a fundamental material essential for the automotive, construction, and manufacturing sectors. The manufacturing process involves rolling steel at high temperatures, which allows for precise shaping and efficient coiling. This format ensures that the material is optimized for both compact storage and convenient long-distance transportation.

Application & Usage

Primary Industries

Automotive, Construction, Manufacturing

Manufacturing Details

Handling Characteristics

- High-temperature formation
- Compact coiled storage
- Logistically efficient

Process Method

Hot Rolling
