

Hotel Building

The building features a tall, rectangular structure with numerous windows and cylindrical columns. An adjacent, lower building with a curved facade and gray stone finish adds to the complex's aesthetic.

Project Overview

Architectural Excellence in Algeria

The Airport Hotel in Algeria stands as a landmark of modern architectural design, perfectly suited for high-traffic hospitality environments. Its structure combines a robust, tall rectangular main building with sophisticated cylindrical columns, providing both aesthetic appeal and structural presence. The complex is further enhanced by an adjacent building featuring a unique curved facade and high-quality stone finishes, making it an ideal candidate for premium lodging or commercial development projects.
