Product Overview

Intelligent Hotel Energy Management

This hotel room key card power switch is a sophisticated energy-saving solution designed to optimize electricity consumption in hospitality environments. By requiring a valid key card to activate the room's electrical system, it ensures power is only active when the room is occupied, effectively preventing energy waste. The device features a modern, intuitive design that integrates seamlessly with smart hotel systems to provide both convenience for guests and operational cost savings for facility managers.

Key Features

Core Advantages

Energy-Saving, Intelligent Control, Modern Design, Easy Installation, Durable Construction

Applications

Suitable Environments

- Hotels
- Villas
- Offices
- Educational Buildings
- Residential Homes

Technical Specifications

Performance Metrics

250 V

Rated Voltage

50000 cycles

Service Life

System Compatibility

Standard Key Cards • Smart Hotel Systems • Lighting Control • Access Control

Product Ecosystem

Available System Components

Component	Function
Hotel Doorbell	Intelligent control with LED backlight
Dimmer Switch	Energy saving with remote control
Curtain Control	Motorized control for 2 sets
Thermostats	Central heating and AC control
Background Radio	Acoustics and audio system control
