

Household Multi-Stage Water Purification Machine

This water purification machine employs a multi-stage filtration system to remove impurities and contaminants from water. Its compact design is suitable for wall mounting or under-sink installation, and it includes indicators for filter status and water quality monitoring.

Product Overview

Clean Water Solution

This household multi-stage water purification machine provides a reliable method for ensuring clean and safe drinking water. Utilizing an advanced filtration system, it effectively removes sediments, chlorine, organic compounds, dissolved solids, and heavy metals. Its versatile, compact design allows for either wall-mounted or under-sink installation, making it ideal for modern domestic environments.

Technical Features

Filtration Stages	4 stages
Technology Types	Sediment Filtration, Activated Carbon, Reverse Osmosis

Smart Features

Monitoring Capabilities

- Filter status indicator
- Water quality monitoring

Installation

Installation Types

Wall-mounted • Under-sink
