

Husk Grinding Mill

This husk grinding mill is engineered for grinding and processing husks and other agricultural materials. It utilizes a high-speed rotor and durable hammers to efficiently reduce particle size for applications like animal feed production.

Product Overview

Professional Husk Grinding Solutions

The SFSP Husk Mill is a robust processing machine specifically engineered for the efficient grinding of agricultural husks and biomass. It features a high-speed rotor integrated with durable hammers to ensure consistent particle size reduction for applications such as animal feed production. Designed with a heavy-duty frame, the unit provides reliable performance and long-term durability in demanding industrial environments.

Technical Specifications

Safety & Operational Controls

- Overload protection system
- Enclosed housing for dust control
- Noise reduction design
- Adjustable grinding settings for precision

Target Applications

Husk processing • Animal feed production • Biomass processing

Grinding Mechanism

High-speed rotor, Durable hammers
