

HVAC Brass Water Filter with Pressure Gauge

This brass water filter is designed for HVAC&R systems. It removes impurities from water, ensuring optimal performance and longevity of HVAC&R equipment.

Overview

High-Performance HVAC Filtration

This brass water filter is engineered specifically for HVAC and refrigeration systems to maintain optimal fluid quality. It features an integrated pressure gauge for real-time monitoring and a transparent housing for easy visual inspection of filter status. The inclusion of a drain valve allows for efficient sediment removal, ensuring the longevity and reliability of your connected equipment.

Technical Specifications

System Benefits

- Ensures optimal equipment performance
- Extends lifespan of HVAC components
- Enables easy visual monitoring
- Simplifies maintenance with drain valve

Material Composition	Brass
Key Features	Pressure Gauge, Transparent Housing, Drain Valve, HVAC&R Compatible
Primary Application	Removal of impurities from water in HVAC&R systems
