

HVAC Heat Exchanger Coil

This high-efficiency heat exchanger coil is designed for refrigeration and ventilation applications. It features a robust construction with copper tubes and aluminum fins for optimal thermal conductivity.

Product Overview

High-Efficiency HVAC Heat Exchanger

This professional-grade heat exchanger coil is engineered for high-performance thermal conductivity in demanding refrigeration and ventilation environments. Featuring a robust combination of copper tubes and aluminum fins, it ensures optimal heat transfer rates for reliable climate control. The unit is housed in a durable galvanized steel frame, making it an ideal choice for air conditioning units, industrial chillers, and large-scale cooling systems.

Technical Specifications

Common Applications

- Air conditioning units
- Industrial chillers
- Ventilation systems
- Refrigeration systems

Materials

Copper Tubes, Aluminum Fins, Galvanized Steel Frame

Performance

Performance Features

Optimal Thermal Conductivity • High-Efficiency Heat Transfer • Reliable Durability
