

HVAC&R Oil Pump for Water Pumping

This high-performance oil pump is designed for HVAC&R systems, specifically for water pumping applications. It features a durable construction, efficient motor, and optimized fluid dynamics for reliable operation.

Product Overview

Professional HVAC&R Oil Pump

The YB-T1 oil pump is a high-performance solution engineered specifically for HVAC&R systems with water pumping requirements. Its durable construction and optimized fluid dynamics ensure reliable, consistent oil circulation in demanding industrial and commercial environments. The unit is designed for seamless integration, featuring standardized inlet and outlet ports to support efficient system installation.

Technical Specifications

Key Features

- High-performance design
- Durable construction
- Efficient motor
- Optimized fluid dynamics
- Standardized inlet/outlet connections

Model Identifier	YB-T1
Primary Applications	HVAC&R, Water Pumping, Industrial, Commercial
