

HVAC&R Receiver Dryers

Receiver dryers remove moisture and contaminants from refrigerant in HVAC&R systems. They come in various sizes, shapes, and materials like steel and copper.

Product Overview

Essential HVAC&R Components

Receiver dryers serve as a critical component in HVAC&R systems, functioning primarily to remove moisture and contaminants from the refrigerant. By maintaining the purity of the refrigerant, these units ensure the optimal performance and longevity of the entire air conditioning or refrigeration system. Available in various materials and configurations, they are designed to meet diverse installation and operational requirements.

Technical Specifications

Design Features

- Moisture removal
- Contaminant filtration
- Multi-port configurations available

System Compatibility

HVAC Systems • Refrigeration Systems

Construction Materials

Steel, Copper
