

Hybrid Electric City Bus

This hybrid electric vehicle is designed for urban transportation. It features a spacious interior with comfortable seating and ample standing room.

Overview

Advanced Urban Mobility Solution

The Hybrid Electric City Bus is a modern urban transportation solution designed to balance performance with environmental responsibility. Featuring a sophisticated hybrid powertrain that combines a diesel engine with an electric motor, it significantly reduces emissions while improving fuel efficiency for city routes. Its aerodynamic exterior and spacious interior provide a comfortable and safe experience for both drivers and passengers.

Performance & Efficiency

Powertrain System

Hybrid Electric • Diesel-Electric Combo • Reduced Emissions

Efficiency Features

6128 HEV

Model Series

Design & Capacity

Interior Configuration

- Spacious cabin layout
- Comfortable passenger seating
- Ample standing room
- Large windows for visibility

Exterior Characteristics

Modern aerodynamic styling with high-visibility glazing.

Safety & Reliability

Safety Equipment

ABS, Electronic Stability Control, Anti-lock Brakes

Engineering Standard

Engineered for high reliability in public transportation systems.
