Overview

Hybrid Performance Design

This hybrid multi-clip wiper blade combines the benefits of conventional and flat blade designs to provide optimal contact with modern, highly curved windshields. Engineered with a memory-curved steel spring, it ensures consistent, even pressure for superior, streak-free wiping performance in all weather conditions. Its aerodynamic profile significantly reduces wind lift, while the durable, Teflon-infused rubber construction promotes longevity and clear visibility.

Performance & Construction

Key Features

- Memory-curved steel spring for even pressure distribution
- Aerodynamic design to reduce wind lift
- OE quality Teflon-infused rubber
- All-weather performance capability
- Easy replacement function

Compatibility & Installation

Supported Wiper Arm Types

| Arm Type | Details |
|-------------|-------------------------------|
| Hook | Standard |
| Push Button | Wide (22mm) and Narrow (19mm) |
| Pinch Tab | Standard |
| Side Pin | Long (22mm) and Short (17mm) |
| Side Lock | Standard |
| Bayonet | Standard |
| Opposed | Wiper systems |
