

Hydraulic Angle Sweeping Broom

This angle broom is a robust sweeping attachment for industrial and agricultural use. Its high-density bristles and heavy-duty steel frame ensure effective and durable removal of debris from surfaces.

Overview

High-Performance Sweeping Solution

The Hydraulic Angle Sweeping Broom is a robust and efficient attachment engineered for demanding industrial and agricultural environments. Designed for versatility, its high-density bristle configuration and powerful hydraulic drive system effectively clear debris, snow, and surface materials. The adjustable mounting system ensures compatibility with various machinery, while the angled design allows for precision cleaning along edges and corners.

Technical Specifications

Drive Mechanism	Hydraulically driven
Frame Material	Heavy-duty steel
Key Features	High-density bristles, Angle adjustment, Hydraulic drive, Adjustable mounting

Applications

Primary Applications

- Industrial site maintenance
- Agricultural debris removal
- Snow clearing
- Surface cleaning
