

Hydraulic Automatic Blow Molding Machine

This hydraulic automatic blow molding machine is designed for efficient production in light industry. It features a three-station or single-station configuration, optimized for precision and reliability.

Product Overview

Compact Hydraulic Precision

This hydraulic automatic blow molding machine is engineered for high-efficiency production in light industry applications. Featuring a streamlined design, it offers a small footprint while maintaining robust hydraulic power for consistent results. Its single-station configuration is optimized for precision, reliability, and ease of automated control in modern manufacturing environments.

Technical Specifications

Automation Level

Fully Automatic

Drive System

Hydraulic

Configuration

Single Station

Application

Suitable Industries

Light Industry, Blow Molding
