

Hydraulic Brake Booster Assembly

This hydraulic brake booster assembly enhances braking performance. It provides power assist in automotive braking systems.

Product Overview

Hydraulic Brake Booster Assembly

This hydraulic brake booster assembly is engineered to provide reliable power assistance for automotive braking systems. Featuring a robust construction with a distinct reddish-brown finish, the unit includes a precision-machined cylindrical body and a secure mounting flange. This component is designed to ensure consistent braking performance and durability in demanding vehicle applications.

Technical Specifications

Component Type	Hydraulic Brake Booster Assembly
Finish Color	Reddish-brown
Design Features	Cylindrical Body, Conical Output Section, Mounting Flange
Reference Dimension	254X254
