

Hydraulic Brass Cutter

This hydraulic brass cutter is designed for efficiently cutting brass materials. Its hydraulic mechanism ensures clean and accurate cuts, minimizing deformation and material waste.

Product Overview

Precision Hydraulic Brass Cutting

The CWC-150 is a specialized hydraulic tool engineered for clean and efficient cutting of brass materials. Designed for auto-control distributor projects and industrial fabrication, this unit ensures precise 90-degree and 45-degree angles without damaging the material. Its portable design allows for easy transport, while the robust hydraulic mechanism delivers consistent, high-quality results for demanding professional applications.

Technical Specifications

Performance Metrics

15 ton

Output Force

150 mm

Max Cutting Breadth

10 mm

Max Thickness

26 kg

Weight

Compatible Hydraulic Pumps

- CP-700
- CP-700-2A
- DYB-63A
- CTE-25AS

Features

Operational Notes

- Suitable for auto-control distributor projects
- Flat cutting design prevents material damage
- Easy to carry and transport
- Includes lock-out mechanism for full access

Key Features

Hydraulic Operation, Angle Indicators (90°/45°), Portable Design, Material Protection
