

Hydraulic Busbar Punching Tool

This hydraulic busbar punching tool is designed for cutting busbars. It features a maximum pressure of 700 bar and delivers an output force of 120kN.

Overview

Professional Hydraulic Punching Solution

The ESH-25 is a high-performance electric hydraulic punching tool designed for precision work on electric poles and busbars. It features a built-in microcomputer chip controller for reliable usage tracking, automatic pressure relief, and a two-stage hydraulic system. Built for field efficiency, it includes LED work lighting and an 18V lithium battery system to support demanding industrial applications.

Performance Metrics

Key Performance Metrics

12 t Output Force	700 bar Rated Pressure	25 mm Throat Depth	10 kg Weight
-----------------------------	----------------------------------	------------------------------	------------------------

Technical Specifications

Punching Capacity

Material Type	Max Thickness
Angle Steel	6 mm
Copper and Aluminum Row	6.5 mm

Included Punching Dies

- 10.5
- 13.5
- 17.5

Power and Features

Power System	18V Lithium Battery with fast charger
Key Features	Microcomputer Control, Automatic Pressure Relief, Two-Stage Hydraulics, LED Work Light

Packaging

Packaging	Plastic Carrying Case
