

Hydraulic Clutch Booster and Master Cylinder Assembly

This assembly includes a hydraulic clutch booster and a master cylinder, essential components for a vehicle's clutch system. The booster amplifies the force applied to the clutch pedal, reducing driver effort.

Product Overview

High-Performance Hydraulic Clutch System

This integrated hydraulic clutch booster and master cylinder assembly is engineered for heavy-duty vehicle applications. By amplifying the force applied to the clutch pedal, the booster significantly reduces driver fatigue while ensuring consistent and reliable clutch actuation. The master cylinder efficiently converts pedal force into the hydraulic pressure required to operate the release mechanism, providing a robust and durable solution for demanding operating environments.

Technical Specifications

Included Components

- Hydraulic Clutch Booster
- Master Cylinder
- Push Rod with Clevis
- Protective Boots

Key Performance Benefits

Force Amplification • Reduced Driver Effort • Durable Construction

Application Suitability

Heavy-Duty, Hydraulic Clutch System
