

Hydraulic Clutch Master Cylinder

This hydraulic clutch master cylinder is designed for automotive clutch systems. It converts mechanical force from the pedal into hydraulic pressure to actuate the clutch release mechanism.

Product Overview

Hydraulic Clutch Master Cylinder

This hydraulic clutch master cylinder is engineered for reliable performance in automotive clutch systems. It efficiently converts mechanical force from the clutch pedal into the hydraulic pressure required to actuate the clutch release mechanism. Constructed from durable metal alloys, this component is designed to withstand high-pressure operation while resisting corrosion for long-lasting service life.

Technical Specifications

Key Components

- Fluid reservoir
- Adjustable push rod with clevis
- Piston and cylinder assembly
- Protective rubber boot
- Mounting flange

Construction Materials	Durable Metal Alloy, Cast Metal Body
------------------------	--------------------------------------

Reference ID	160107
--------------	--------

Application & Compatibility

System Compatibility

Automotive Clutch Systems

Performance Features

- High-pressure operation capability
- Corrosion resistant
- Adjustable pedal linkage connection
