

# Hydraulic Clutch Master Cylinder

This clutch master cylinder is a hydraulic component that converts mechanical force from the driver's foot into hydraulic pressure. This pressure is then transmitted to the clutch slave cylinder, disengaging the clutch.

## Product Overview

### Hydraulic Clutch Master Cylinder

This hydraulic clutch master cylinder is engineered to efficiently convert mechanical force from the driver's pedal into hydraulic pressure. Designed for demanding automotive applications, it ensures reliable performance and consistent clutch disengagement. Built with high-quality materials, the unit is resistant to the corrosive effects of hydraulic fluid, providing long-term durability and smooth operation for enhanced driver control.

## Technical Details

### Component Type

Hydraulic • Clutch System

### Product Code

X0009

### Part Number

443 611 004 001

## Performance Features

### Key Benefits

- Corrosion-resistant construction
- Consistent clutch operation
- Robust design for high-stress environments
- Precise hydraulic pressure transmission
