

Hydraulic Coiler Decoiler for Steel Coil Rolling Mills

This hydraulic coiler decoiler is designed for use in steel coil cold rolling mills. It facilitates the coiling and decoiling of steel coils, improving material handling and processing.

Product Overview

Heavy-Duty Hydraulic Coiling System

This hydraulic coiler and decoiler is engineered specifically for demanding steel coil rolling mill environments. It facilitates efficient material handling by enabling smooth coiling and decoiling processes in industrial lines. Built for durability, this robust machinery is designed to optimize operational throughput and minimize equipment downtime in heavy-duty manufacturing.

Technical Capabilities

Compatible Materials

- Steel
- Copper
- Aluminum

Suitable Industrial Lines

Cold Rolling Mill, Hot Rolling Mill, Color Coating Line, Galvanizing Line, Annealing Line, Degreasing Line

Components and Spare Parts

Key Components

- Mandrel shaft
- Segments
- Hydraulic coiler/recoiler assembly
- Decoiler assembly
