

Hydraulic Component with Nozzle End

This hydraulic component is designed with a nozzle-like end for precise fluid control. Its robust construction ensures reliable performance in demanding hydraulic systems.

Product Overview

Precision Hydraulic Component

This hydraulic component is engineered for reliable performance in demanding fluid power systems. Featuring a distinct nozzle-end design, it ensures precise flow control and secure connectivity. The unit is constructed with a durable yellow and blue finish, combining robust build quality with clear visual identification for maintenance and installation purposes.

Physical Characteristics

Design Features

- Nozzle-end configuration
- Blue grip section
- Yellow cylindrical body
- Dark-colored nozzle opening

Component Category

Hydraulic Part

Color Scheme

Yellow, Blue
