

Hydraulic Cylinder

This hydraulic cylinder is designed with technology innovation, offering high performance. Its structure provides large force, good stability, high buffering performance, and convenient installation.

Overview

High-Performance Hydraulic Cylinder

The WLCDH2/WLCGH2 series hydraulic cylinder is engineered for durability, stability, and high buffering performance. Designed to meet rigorous industrial standards, these cylinders offer high reliability and are fully compatible with international mounting and connecting standards. They are suitable for demanding applications across sectors including metallurgy, mining, and heavy construction.

Standards & Compatibility

Mounting Standards	DIN 24333, ISO 6022
--------------------	---------------------

Applications

Industry Applications

- Metallurgical machinery
- Heavy construction
- Transportation
- Mining
- Chemical industry
- Agricultural machinery
- Hydraulic engineering
- Petroleum drilling
- Scientific research projects

Technical Features

Key Features

Rugged Construction • High Buffering Performance • Easy Maintenance • High Reliability

Customization	Yes
