

Hydraulic Cylinder

This hydraulic cylinder features a reasonable structure, delivering reliable performance and stable quality. Its convenient installation, usage, and maintenance make it a well-received product.

Product Overview

DG-JB Series Hydraulic Cylinder

The DG-JB type single stem double function piston is engineered for heavy-duty performance in demanding industrial environments. Designed with a focus on structural integrity and reliability, this cylinder ensures precise linear motion for automatic control systems. Its robust construction makes it an ideal solution for mining machinery, lifting equipment, and excavator engineering applications.

Technical Specifications

Piston Configuration	Single stem, double function
Model Series	DG-JB

Key Features

Key Benefits	Reliable Performance, Stable Quality, Easy Installation, Low Maintenance
--------------	--

Applications

Industry Applications

- Mining Machinery
- Lifting Machinery
- Excavator Engineering
- Automatic Hydraulic Control Systems
