

Hydraulic Excavator

This excavator is designed for digging, lifting, and moving materials on construction sites, road work, and landscaping projects. It features a powerful hydraulic system, durable tracks, and a comfortable cabin for efficient operation.

Overview

High-Performance Hydraulic Excavator

This robust hydraulic excavator is engineered for demanding construction and earthmoving tasks, featuring a reliable imported engine and advanced electrical control systems. It is equipped with premium hydraulic components to ensure smooth, powerful operation for heavy-duty digging and lifting. Designed with operator comfort in mind, the unit includes a luxurious, climate-controlled cabin to maximize productivity during long shifts.

Key Features

Core Features

- Imported engine
- Advanced electrical control system
- Original imported hydraulic components
- Luxurious cabin with air conditioning

Performance Metrics

Performance Highlights

89.3 kW

Engine Power

151.3 kN

Tractive Effort

85 kN

Max Bucket Digging Force

67 kN

Max Arm Digging Force

Operational Speeds

- Slew speed: 13.6 rpm
- Max travel speed (high/low): 5.92 / 3.63 km/h

Gradeability

35 degrees

Technical Specifications

Engine Specifications

Attribute	Value
Model	AA-4BG1TCP
Type	Turbo-charged with inter-cooler
Power	89.3 kW @ 2200 rpm

Dimensions and Capacity

Metric	Value	Unit
Operating weight	13600	kg
Standard bucket capacity	0.6	m3
Track shoe width	600	mm
Arm length	2500	mm
