

Hydraulic Excavator

This hydraulic excavator is a powerful piece of construction equipment designed for digging, trenching, and material handling. It features a robust hydraulic system, a comfortable operator cabin, and advanced controls for precise operation.

Overview

Heavy-Duty Hydraulic Excavator

This hydraulic excavator is engineered for demanding construction, mining, and material handling environments. Featuring a robust hydraulic system and advanced operator controls, it delivers high digging force and superior stability on various terrains. Designed for optimal productivity, this machine combines efficient performance with durable construction to handle heavy-duty applications reliably.

Performance Metrics

Performance Highlights

1 High

Efficiency

1 Low

Consumption

Model Number

904C

Features

Application Suitability

- Construction Sites
- Mining Operations
- Material Handling
- Trenching

Key Features

Robust Hydraulic System, High Digging Force, Stable Platform, Advanced Controls
