

Hydraulic Excavator for Construction

The hydraulic excavator is a robust construction machine designed for digging and moving materials. Its compact size makes it suitable for working in confined spaces.

Product Overview

KY70-8 Hydraulic Excavator

The KY70 hydraulic excavator is a robust construction machine engineered for efficient digging, lifting, and material handling on various job sites. Designed with a durable chassis and a powerful hydraulic system, it ensures reliability and high performance even in demanding environments. Its compact footprint makes it an ideal choice for operations in confined spaces where maneuverability is essential. The unit comes fully equipped with a digging bucket and a blade, offering versatile application capabilities for construction professionals.

Technical Specifications

Included Equipment

- Digging bucket
- Blade

Application Suitability

Construction Sites • Confined Spaces • Material Handling • Excavation

Model

KY70-8

Key Features

Compact Design, High-Quality Components, Powerful Hydraulics, Durable Chassis
