

Hydraulic Flange Spreader

This hydraulic flange spreader separates flanges during pipeline maintenance, testing, or replacement. It utilizes hydraulic power to generate force for creating a gap to insert gaskets or perform other tasks.

Product Overview

Hydraulic Flange Spreader

The Hydraulic Flange Spreader is a specialized tool engineered for separating flanges during pipeline maintenance, testing, or replacement procedures. Utilizing hydraulic power, it generates the necessary force to create precise gaps for gasket insertion or critical maintenance tasks. Its compact, high-strength construction ensures reliable performance even in confined industrial spaces.

Technical Specifications

Model Identifier

14 FSH

Model Series

Key Design Features

- Hydraulic power actuation
- High-strength material construction
- Compact form factor for confined spaces
- User-friendly operation

Primary Application

Pipeline Maintenance, Flange Separation, Gasket Replacement, Industrial Testing
