

Hydraulic Floor Jack for Automotive and Industrial Use

Hydraulic floor jacks are designed for lifting heavy loads in automotive and industrial applications. These jacks are constructed from high-strength steel and feature a low profile for easy access under vehicles and machinery.

Product Overview

Professional Hydraulic Floor Jack

This high-strength steel hydraulic floor jack is engineered for demanding automotive and industrial lifting applications. Featuring a low-profile design, it provides excellent clearance for easy access under vehicles and heavy machinery. The precision hydraulic system ensures smooth, controlled operation, while an integrated safety valve protects against overloading during use.

Technical Specifications

Safety Features

Overload Protection • Controlled Descent

Construction Material	High-strength steel
-----------------------	---------------------

Mechanism Type	Hydraulic
----------------	-----------

Features

Key Features

- Low-profile design for easy access
- Integrated safety overload valve
- Swivel casters for maneuverability
- Long handle for ergonomic pumping

Applications	Automotive, Industrial, Heavy Machinery
