

Hydraulic Flow Control and Relief Valve

This industrial component combines flow control and relief valve functions for hydraulic systems. It allows precise flow or pressure regulation via an adjustment knob and features multiple ports for hydraulic line connections.

Product Overview

Precision Hydraulic Control

This industrial component serves as a dual-function hydraulic flow control and relief valve, engineered for demanding fluid power environments. Featuring a robust, cast metal construction, it is built to withstand rigorous operational conditions while maintaining system integrity. The integrated adjustment knob, complete with numerical markings, allows operators to achieve precise regulation of fluid flow and pressure, ensuring optimal performance across various hydraulic applications.

Technical Specifications

Construction	Robust Cast Metal
Adjustment Interface	Manual knob with numerical markings
Valve Functions	Flow Control, Pressure Relief
Installation	Integrated mounting interface for secure installation
