

Hydraulic Ironworker for Metal Fabrication

The hydraulic ironworker is a versatile metal fabrication machine designed for punching, shearing, notching, and bending various metal materials. It features a robust steel frame for stability and precision, with hydraulic cylinders providing powerful and controlled operation.

Overview

Versatile Metal Fabrication Solution

The Q35Y-16/20 series hydraulic ironworker provides a robust solution for diverse metal fabrication needs, including punching, shearing, notching, and bending. Built with a heavy-duty steel frame, the machine ensures maximum stability and precision for professional shop environments. Its integrated multi-workstation design allows operators to transition efficiently between tasks while maintaining high output quality. Enhanced safety systems, including emergency stops and interlocks, make this an ideal choice for manufacturing, construction, and metalworking industries.

Technical Specifications

Available Operations

- Punching
- Shearing
- Notching
- Bending

Safety Equipment

Emergency Stop, Safety Interlocks

Construction

Frame Material

Robust Steel

Drive System

Hydraulic
