

Hydraulic Ironworker for Metal Punching, Shearing, Notching, and Bending

This multi-function hydraulic ironworker is a versatile machine-tool designed for punching, shearing, notching, and bending metal. It features a robust hydraulic system for efficient and precise operation.

Overview

Versatile Metal Processing Solution

This multi-function hydraulic ironworker is a versatile machine-tool engineered for precision punching, shearing, notching, and bending of metal components. Designed for high efficiency, it features a robust hydraulic system and a dedicated worktable that supports various metalworking tasks. With integrated safety features, including a transparent guard around the tooling area, it provides a comprehensive and secure solution for fabrication shops, manufacturing facilities, and construction sites.

Capabilities

Ideal Applications

Fabrication Shops • Manufacturing • Construction Sites

Core Functions

Punching, Shearing, Notching, Bending

Technical Features

Safety Equipment

- Transparent tooling area guard
- Robust hydraulic system

Design Highlights

- Integrated worktable support
- Multi-function tooling assembly
- Hydraulic operation
