

Hydraulic Metal Bending Machine

This hydraulic bending machine is designed for precision metal forming. It features a robust frame for stability, a programmable control panel for automated operation, and a multi-axis back gauge system for accurate part positioning.

Overview

High-Performance Hydraulic Bending Solutions

This series of hydraulic metal bending machines is engineered for precision material forming across a variety of industrial applications. Featuring a robust steel frame construction, these machines provide exceptional stability and durability during high-pressure operations. Equipped with advanced hydraulic systems and integrated control interfaces, they offer reliable, automated bending capabilities suitable for diverse manufacturing requirements.

Technical Specifications

Technical Data Matrix

Model	Pressure (kN)	Table Length (mm)	Weight (kg)
63t/2500	630	2500	4200
63t/3200	630	3200	5000
80t/3000	800	3200	5600
80t/4000	800	4000	6200
100t/3200	1000	3200	6400
100t/4000	1000	4000	7100
125t/3200	1250	3200	6800
125t/4000	1250	4000	7400
160t/3200	1600	3200	10000
160t/4000	1600	4000	11000

Power Range

5.5 kW

Standard Power

11 kW

Max Power

Key Features

Hydraulic Clamping, Programmable Control, Safety Light Curtains, Multi-axis Back Gauge, Integrated Cooling System
