

Hydraulic Metal Sheet Shearing Machine

This hydraulic shearing machine features a steel welded structure. Three guide trolleys enable accurate movement and fine shearing results.

Product Overview

Industrial Hydraulic Shearing Performance

This hydraulic metal sheet shearing machine is engineered for precision and efficiency in industrial metalworking applications. Built with a robust, vibration-aged steel welded structure, it ensures high strength and exceptional rigidity during operation. The machine is equipped with advanced features including electrical blade gap adjustment, digital back gauge control, and specialized press feet to protect work piece surfaces.

Technical Features

Operational Capabilities

- Electrical blade gap adjustment
- Digital display for back gauge settings
- Integrated shearing count function
- LED lighting for marking assistance
- Specialized press feet for surface protection

Best For

Shallow Plate Shearing • Precision Metal Cutting

Structural Design

Steel Welded Structure, Vibration Aging Technology, High Rigidity
