

Hydraulic Pipe Cutter

This hydraulic pipe cutter is designed for efficiently cutting pipes. It features a hydraulic pump system with a manual lever for controlled cutting force.

Product Overview

Industrial Hydraulic Pipe Cutting Solution

This robust hydraulic pipe cutter is engineered for professional industrial applications requiring high-precision cutting. It features an integrated hydraulic pump system with a manual operation lever, ensuring controlled and consistent cutting force. The heavy-duty metal frame provides exceptional stability and durability, while the adjustable roller system guides pipes securely during the operation.

Technical Specifications

Model Identification	QG325-A-II
Drive Mechanism	Electric motor with manual hydraulic pump assistance
Frame Material	Heavy-duty reinforced metal

Operational Features

Standard Features

- Manual hydraulic lever for force control
- Multiple pipe support rollers
- High-speed electric circular blade
- Industrial-grade chassis

Country of Origin

China
