

Hydraulic Pipe Grooving Machine

This pipe grooving machine utilizes a hydraulic system to create precise grooves in pipes. It is designed for versatility in handling different pipe sizes and materials.

Product Overview

Robust Hydraulic Grooving Solution

This hydraulic pipe grooving machine is engineered for precision and consistent performance in both workshop and on-site environments. Featuring a reliable hydraulic system and adjustable depth settings, it ensures accurate groove creation for mechanical coupling systems. Its versatile design allows for handling diverse pipe materials and sizes, facilitating secure and leak-proof connections.

Technical Specifications

Included Components

- Manual hydraulic pump
- Grooving rollers
- Adjustable depth setting

Operation Type	Manual hydraulic pump
Roller Parameters	Pinch roller, Knurl roller

Application

Primary Applications

On-site installation • Workshop maintenance • Mechanical pipe coupling
