

Hydraulic Pipe Welding Positioner

This heavy-duty industrial machine is designed for precise welding of large pipes and cylindrical workpieces. It features a robust steel frame and hydraulic drive for smooth, controlled rotation and adjustable tilt angles.

Overview

Heavy-Duty Welding Solution

The Hydraulic Pipe Rotating Welding Positioner is a robust industrial machine engineered for the precise and efficient welding of large pipes and cylindrical workpieces. Featuring a durable steel frame and a high-performance hydraulic drive system, it offers smooth, controlled rotation to ensure consistent weld quality. Designed for versatility, the cradle securely holds various pipe diameters while allowing for adjustable rotation speeds and tilt angles to optimize operator ergonomics.

Technical Specifications

Drive System	Hydraulic
Frame Material	Steel
Key Features	Adjustable Rotation Speed, Adjustable Tilt Angle, Heavy-Duty Construction

Safety & Compliance

Safety Mechanisms

- Overload protection
- Emergency stop mechanisms

Applications

Suitable Applications

Fabrication Shops • Pipeline Construction • Heavy Industrial
