

Hydraulic Press Brake Machine

This hydraulic press brake machine is engineered for precision metal sheet bending. It uses hydraulic power to accurately form metal sheets into various angles and shapes.

Overview

High-Performance Hydraulic Press Brake

This hydraulic press brake machine is engineered for precision metal bending and forming applications in industrial environments. Featuring a robust construction with a distinct red and black exterior, it ensures stability and durability during high-load operations. The integrated control panel provides operators with intuitive command over the bending process, while the surrounding safety railing enhances workplace security.

Technical Specifications

Machine Type	Hydraulic Press Brake
Key Features	Hydraulic System, Precision Bending, Integrated Control Panel, Safety Railing

Design & Build

Color Scheme

Red • Black

Safety Equipment

- Yellow safety railing
- Clamping mechanism guards
