

Hydraulic Press for Garments and Shoes

This hydraulic press is designed for manufacturing garments, shoes, and accessories. It utilizes a vertically mounted hydraulic cylinder and upper/lower platens to press, shape, or bond materials.

Overview

Industrial Hydraulic Press Solution

This hydraulic press is engineered specifically for the garment, shoe, and accessory manufacturing industries. Featuring a robust frame and a vertically mounted hydraulic cylinder, it provides consistent pressure for stamping, shaping, and bonding various materials. Designed for high-volume production environments, this machine ensures precision and efficiency in material processing tasks.

Technical Specifications

Process Capabilities

- Stamping
- Shaping
- Bonding

Design Features

Robust Frame • Vertical Hydraulic Cylinder • Integrated Control Panel • Dual Platen System

Primary Application

Garment Manufacturing, Shoe Production, Accessory Manufacturing
