

Hydraulic Punching Machine 800/500 kN

This hydraulic punching machine is designed for industrial applications requiring precision punching on various materials. Its hydraulic system ensures consistent and powerful performance, while the sturdy frame minimizes vibration.

Overview

Industrial Hydraulic Punching Solution

The 800/500 kN Hydraulic Punching Machine is a robust solution engineered for high-precision operations in demanding metal fabrication and construction environments. Featuring a sturdy, vibration-resistant frame and a high-performance hydraulic system, it provides consistent power for diverse punching tasks. Equipped with versatile tooling options and comprehensive safety features, this machine is designed to enhance productivity while ensuring operator protection in industrial settings.

Performance

Punching Force

800 kN

Primary Punching Force

500 kN

Secondary Punching Force

Technical Specifications

Key Capabilities

- Adjustable stroke length
- Versatile tooling system for various shapes
- High-stability frame construction
- Vibration reduction technology

Safety & Compliance

Safety Equipment

Emergency Stop, Protective Guarding

Applications

Suitable Industries

Metal Fabrication • Construction • Manufacturing
