

# Hydraulic Quick Connect Coupling

This hydraulic coupling is designed for reliable fluid transfer in hydraulic systems. Constructed from high-strength steel, it offers durability, corrosion resistance, and a secure locking mechanism.

## ADDITIONAL IMAGES

## Overview

### Hydraulic Quick Connect Coupling

This precision-engineered hydraulic quick coupling is designed for reliable fluid transfer across demanding hydraulic systems. Constructed from high-strength steel, it offers exceptional durability and corrosion resistance, ensuring long-term performance in industrial, agricultural, and construction environments. The unit features a secure ball-locking mechanism to prevent accidental disconnection, while maintaining minimal pressure drop for efficient operation.

## Technical Specifications

### Max Operating Pressure

**5000 PSI**

Operating Pressure

### Temperature Range

-40°F to 250°F

### Compatible Series Models

KZE, KZA, KZB, QKPT

## Construction & Materials

### Material

High-strength Steel • Corrosion Resistant

### Locking Mechanism

Ball-locking mechanism

## Applications

### Suitable Industries

- Industrial Machinery
- Agricultural Equipment
- Construction Vehicles
