

Hydraulic Quick Connect/Disconnect Coupling

This hydraulic quick connect/disconnect coupling enables swift changes in fluid transfer systems. Its design incorporates spring-loaded mechanisms and multiple connection points for secure, rapid connections.

Product Overview

Professional Hydraulic Coupling System

This hydraulic quick connect/disconnect coupling is engineered for high-performance fluid transfer in demanding industrial environments. Featuring a robust, heavy-duty construction, it utilizes a sophisticated multi-port configuration to facilitate rapid and secure line management. The integrated spring-loaded mechanisms and manual levers ensure reliable operation, making it an ideal solution for complex hydraulic systems requiring frequent maintenance or reconfiguration.

Technical Specifications

Application Suitability

Heavy-duty • Industrial • Fluid Transfer

Configuration

- Circular flange interface
- Multi-line connectivity
- Rapid release system

Design Type

Multi-port Quick Connect/Disconnect

Connection Mechanism

Spring-loaded, Lever-actuated, Flange-mount
