

Hydraulic Rebar Cutter

This hydraulic rebar cutter is a powerful and efficient tool designed for cutting rebar in construction and demolition applications. Its hydraulic system provides high cutting force, allowing for clean and precise cuts.

Product Overview

High-Performance Hydraulic Cutting

This hydraulic rebar cutter is a powerful and efficient tool designed specifically for cutting rebar in demanding construction and demolition applications. Its robust hydraulic system provides high cutting force, ensuring clean and precise results every time. With a compact and lightweight design, it offers excellent maneuverability, making it an ideal choice for operation in confined spaces.

Key Features

Key Features

- Durable construction
- Hardened steel blades
- Integrated safety valve to prevent overload
- High-force hydraulic system

Applications

Ideal Applications

Construction Sites, Bridge Building, Demolition, Heavy-duty Cutting

Compatibility

Compatible Machinery

Loader • Excavator • Bulldozer
