

Hydraulic Reversible Compactor

This robust machinery is designed for efficient compaction tasks. The compactor features a powerful hydraulic system that allows for smooth, reversible operation, improving both maneuverability and productivity.

Overview

High-Performance Compaction

The Hydraulic Reversible Compactor is a robust and efficient machinery designed for demanding construction tasks. It features a powerful hydraulic system for smooth and reversible operation, significantly enhancing maneuverability and productivity on the job site. Its durable construction ensures longevity and reliability, making it an ideal choice for compacting soil, asphalt, and granular materials.

Technical Features

| | |
|----------------------|---|
| Operation Type | Hydraulic Reversible |
| Primary Applications | Soil Compaction, Asphalt Compaction, Granular Materials |
