

Hydraulic Ride-On Vibratory Road Roller

This ride-on road roller features hydraulic steering and vibration control for easy operation. It is suited for compacting asphalt surfaces, gravel, and sand in road construction and maintenance.

Overview

High-Performance Hydraulic Ride-On Roller

This hydraulic ride-on vibratory road roller is engineered for efficient compaction in construction and municipal maintenance projects. Featuring a powerful engine and advanced hydraulic systems, it offers stepless variable speed and easy steering for precise operation. Designed for comfort and durability, it includes an adjustable seat and high-quality internal components, making it an ideal choice for compacting asphalt, soil, and gravel in confined areas.

Technical Specifications

Engine Type	High-performance combustion engine
Drive System	Hydraulic system with variable pump and motor
Steering	Hydraulic power steering
Speed Control	Stepless variable speed

Features

Key Operational Features

- Small turning radius for trench backfilling
- Hydraulic vibration control
- Easy forward and reverse switching
- Ergonomic adjustable seat
- Corrosion-resistant surface coating

Applications

Primary Applications	Asphalt Surface Compaction, Trench Backfilling, Sidewalks, Bridges, Car Parks, Sports Grounds, Narrow Field Compaction
