

Hydraulic Rubber Bale Cutter

This heavy-duty bale cutter utilizes a hydraulic system for efficient rubber processing. It features a roller conveyor to facilitate material handling and is built with high-strength steel for enhanced durability.

Product Overview

Industrial Hydraulic Rubber Bale Cutter

This heavy-duty hydraulic bale cutter is engineered for efficient and reliable rubber processing in industrial environments. Featuring a robust hydraulic system, it provides the necessary power to slice through rubber bales quickly and safely. The machine includes an integrated roller conveyor system to streamline material handling, ensuring consistent performance and durability for high-volume production lines.

Technical Specifications

Primary Application

Rubber Processing • Bale Cutting

Cutting Mechanism	Hydraulic
Material Handling	Roller Conveyor
Construction Material	High-strength steel
