

Hydraulic Terminal Crimper

This hydraulic crimper is suitable for applying pressure to copper and aluminum terminals and tubes ranging from 16 to 240. It features a built-in relief valve design that activates upon reaching maximum pressure.

Product Overview

Professional Hydraulic Crimping Solution

This hydraulic terminal crimper is designed for secure and consistent crimping of electrical connectors and terminals. Featuring a powerful 100KN crimping force and an H-shape crimping head, it ensures reliable performance for professional electrical applications. The tool includes a built-in safety system and interchangeable dies for versatile use across different cable sizes, making it an essential instrument for electricians and technicians.

Technical Specifications

Crimping Force

100 KN

Crimping Force

Stroke	16 mm
Length	495 mm
Net Weight	4.5 kg

Features & Design

Included Accessories

- Plastic carrying case
- Crimping dies

Key Features

Interchangeable Dies, H-shape Crimping Head, Safety System
