

Hydraulic Toe Jack for Confined Spaces

Hydraulic jacks are used for lifting and handling heavy equipment. The low-profile toe allows lifting objects with minimal ground clearance, and the manual lever provides precise control.

Product Overview

Industrial Hydraulic Toe Jack

This hydraulic toe jack is engineered for heavy-duty lifting in confined spaces where clearance is minimal. Featuring a low-profile toe design, it allows for easy insertion under machinery and equipment for safe, controlled lifting. Its rugged steel construction ensures durability and reliable performance in demanding industrial and construction environments.

Key Features

Key Features

- Low-profile toe for minimal ground clearance
- Rugged steel construction for industrial use
- Manual lever operation for precise control
- Integrated spring return mechanism for efficient retraction

Suitable Applications

Machinery Lifting, Confined Spaces, Industrial Maintenance, Construction

Operational Details

Operation

Manual operation via lever

Retraction

Yes
